

CrimeWatch — Community Safety & Incident Reporting App

Public Safety & Law Enforcement | Web Applications | Data Analytics

CrimeWatch is a web-based community safety platform where citizens can report crimes and suspicious activities in real-time. Authorities can track, manage, and respond to incidents efficiently through an interactive dashboard. With location-based alerts, case status tracking, and crime pattern analytics, CrimeWatch bridges the gap between citizens and law enforcement, empowering communities to stay safe, aware, and connected always.

Tech Stack

C#, ASP.NET Core, ADO.NET, SQL Server, React.js, JavaScript, HTML, CSS

Key Features

- citizen Crime & Incident Reporting
- Real-time Alert Notifications
- Admin & Authority Dashboard
- Case Status Tracking
- Crime Pattern Analytics
- Location-based Alerts
- Secure User Authentication
- Evidence Upload (Images)

Problem Statement

In today's world, crime reporting is delayed, complicated, and inaccessible to the common public. There is no proper platform for citizens to report crimes quickly and track their case status. CrimeWatch solves this by providing a fast, reliable, and transparent platform for real-time incident reporting and law enforcement management.

Solution

CrimeWatch provides a simple web-based platform where citizens report incidents in real-time and authorities respond efficiently through an interactive dashboard with analytics and alerts.

Target Users

- General Public / Citizens
- Police & Law Enforcement
- Government Authorities
- Community Safety Officers
